About Us

For about 30 years, Invento is synonymous with imaginative fun and leisure activities, for a liveable world, for young and old, indoors and outdoors. As an antipole to an increasingly hectic everyday life, people today are looking for leisure activities that focus on fun, relaxation and deceleration. Invento is prepared for these expectations and shapes the leisure time of young and old in many ways and with an exceptional product range. Kites, windspinners, toys - the Invento range includes exceptional, innovative and high-quality products that have a touch of something special. With our products, we improve people's well-being to better meet the ever-increasing challenges of everyday life.

„HQ“ - Created For Fun, Engineered To Last:

With our „HQ“ umbrella brand, we hold a leading position worldwide in the markets for Kites and Windspinners. Due to high quality standards, good customer service, a versatile product range and the development of products by our own German team, Invento differs from its competitors and creates a lasting confidence in the performance of our products.

Toys - „Invento just play“ and brands from all over the world:

Our own toy ranges under the umbrella brand „Invento just play“ stand for extraordinary playing experiences and high quality standards. With a passion for products beyond the ordinary, we complement our own product lines with a variety of well-known brands from all around the world. Let us take you on a discovery trip through our exciting catalogues.

Ecoline: The Economical Kite Collection

Our Ecoline kite range provides excellent value for money. All kites are made of durable ripstop polyester.

↔ 115 cm, ↑ 45 cm, # Polyester, 3 mm fiberglass,
 ↳ Polyester 17 kp, 2 x 30 m on spool, incl.
 🏠 2-5 Bft. (11-38 km/h | 7-24 mph), 👤 8+

↔ 120 cm, ↑ 60 cm, # Ripstop-Polyester, 4 mm fiberglass,
 ↳ Polyester 20 kp, 2 x 25 m on spool, incl.
 🏠 3-5 Bft. (13-38 km/h | 8-24 mph), 👤 8+

↔ 140 cm, ↑ 74 cm, # Ripstop-Polyester, 4 mm fiberglass,
 ↳ Polyester 20 kp, 2 x 30 m on spool, incl.
 🏠 2-5 Bft. (11-38 km/h | 7-24 mph), 👤 10+

A colorful, multi-faceted kite with yellow, orange, red, purple, and green panels, flying over a grassy field. The kite has a black frame and is positioned in the center of the image. The background consists of tall grass and a clear blue sky.

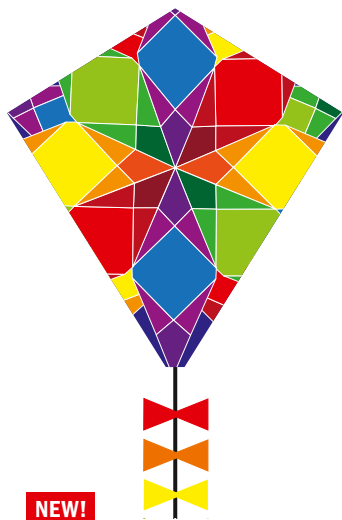

A vibrant rainbow parachute is shown in flight against a clear blue sky. The parachute is composed of multiple vertical panels in the colors of the rainbow: red, orange, yellow, green, cyan, blue, and purple. A black and white logo, which appears to be a stylized bird or wing design, is centered on the yellow panel. Two white suspension lines extend from the bottom of the parachute towards the bottom left corner of the frame.

Ecoline: The Economical Kite Collection

Our ECOLINE kite range provides excellent value for the money. All kites are made of durable ripstop polyester and fiberglass frames. All kites come "Ready to Fly", incl. handle and line.

A masterpiece designed by Rainer Hoffmann. Like a majestic sailing ship, this unusual kite stands tall in the sky, always moving slightly and quietly. The color and shape change depending on your angle of view. This is enhanced by the inclusion of a small tube tail. Weights are included for improved performance in higher winds.

Hoffmann Collection

Born in 1964, Rainer Hoffmann discovered his addiction to Kiteflying during 1986 in St. Peter Ording. After building his

first "regular" kites he quickly proceeded with his own unique designs. He finished 1st place several times during the German Championships since 1997 and already published his own assembly manuals. All kites of Rainer Hoffmann truly convince through tremendous creativity and beautiful designs.

Delta Kites XL

Larger kites are more often easier to fly than small ones. This is especially true with our collection of XL Delta Kites, filling more sky for a great display as they also prove to be perfect flying machines. They will also accommodate 'line laundry', windsocks and more tails for an even greater visual impact.

Removable wings!

KAP Foils

Kite aerial photography (KAP) is photography generated by lifting a camera into the sky through use of a kite. The camera is triggered either remotely or automatically to take aerial shot and can be attached directly to the kite, but is usually secured to an adjustable rig suspended from the kite line. With this elevated view, pilots can capture landscapes, objects, architecture, and people in entirely new ways. The beginning of KAP dates back to the late 19th century. Aerial photography from kites is, in fact, one of the oldest forms of remote sensing of the Earth's surface.

The KAP Foils developed by German kite enthusiast Ralf Beutnagel are reliable and very stable lifter kites for a camera rig. They have been used successfully since 2006 and have impressed many Kite Aerial Photographers by their flight characteristics. The wind range of the KAP Foil is fairly wide. These kites perform very well even in ground winds. Even KAP Foil 8.0 is more than sufficient to carry heavier cameras in light winds. In stronger winds, all KAP Foils fly very stable without slipping sideways.

KAP Foils generate considerable pull. For experienced pilots only. Strict observation of mentioned age and wind range is highly recommended.

HQ SPORTKITES – 30 YEARS OF GLOBAL KITE COMPETENCE!

With 30 years of experience in the development and production of innovative sport kites, the „HQ Sportkites“ brand has a large community of fans worldwide.

Every year, we invest considerable funds in our development work. Our stunt kite models are developed at our site in Rastede/Germany by a highly motivated and competent team that uses lots of practical know-how in the design of new models.

We work according to strict quality standards. Our models are produced with high-quality space-age components and offer best performance and a fair price-performance ratio for dealers and end consumers in their respective classes.

HIGH-TECH FABRIC FOR OUR KITE SAILS

The decisive quality features for a high-quality kite fabric are light weight, tear-resistance and a resilient coating.

Ripstop-Polyester and Nylon

Ripstop means fabrics that have been woven with a special technique and that are particularly tear-proof. Grid-like reinforcement threads are integrated into the thin fabric at distances of 5 to 8 millimetres. Benefits of modern Ripstop fabrics are their extremely light structure, low wetness elongation and very high tear resistance.

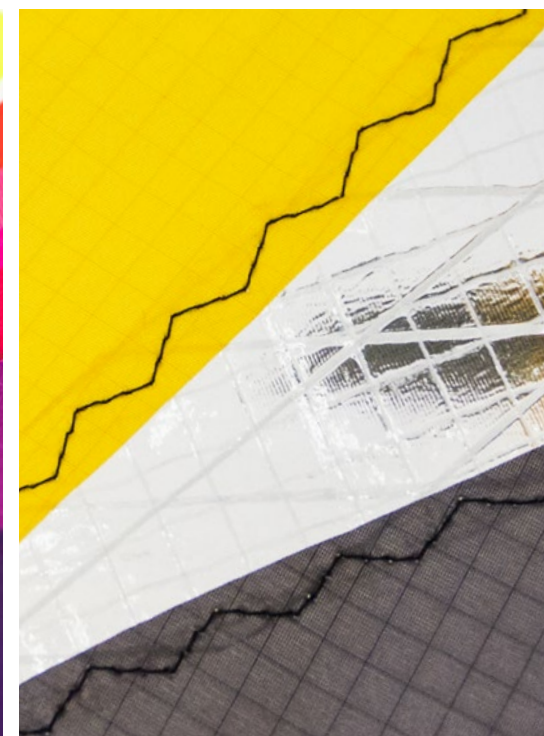

The most important fiber that is processed into Ripstop fabric is polyamide; the fabric produced with this is called Ripstop-Nylon.

Polyester fabric is also processed into Ripstop fabric. Polyester takes up only little moisture, is highly UV-resistant, maintains its shape even when wet and can be coated very well.

Transparent Mylar-Laminate

Mylar-laminate is a high-quality layered composite that is produced of several layers.

The core layer is made up of a highly resilient fiber fabric. The special benefit of Mylar is a high resilience and extreme form retention. Processing of Mylar film also gives any sail a particularly technical and high-quality look.

FRAME OF SPACE AGE COMPOSITES

The frames of all "HQ Sportkites" are constructed solely of state-of-the-art composites that are used in aviation and aerospace as well.

Carbon Fiber

Carbon fibers are a high-tech material that is particularly suitable for applications where a low weight is needed at a concurrent high stiffness. Carbon fibers are stiffer than steel, lighter than fiberglass and twist less easily. Kites with carbon frames therefore fly particularly precisely.

Fiberglass

The strength properties of fiberglass fibers correspond to those of metals, but at a much lower weight. Fiberglass fibers are also extremely flexible and break-proof. We use fiberglass specifically in the construction of beginners' stunt kites. With their "crumple zone", fiberglass stunt kites will easily survive the feared crashes.

Connection Technology

In the connection technology of "HQ Sportkites", we leave nothing to chance with our specifically constructed high-quality "HQ" connectors. Form and material resist the challenges of any wind, weather and temperature.

A BIT OF LINE SCIENCE

Although the quality of the flight lines essentially influence flight performance and flying fun, quite a number of stunt kites are only equipped with moderate quality lines. "HQ Sportkites", however, contain only braided flight lines of high-quality fibers.

Dyneema (Spectra) lines

Their extremely thin, light-weight fibers with very little stretch make Dyneema the ideal lines for stunt kites. At the same weight, Dyneema fibers are much more tension resilient than steel. The minimum elongation of the material (less than 5%) ensures maximum control of the kite, while the very small line cross-section minimises air resistance. The surface of our Dyneema lines is very smooth, so that they will not block or even "saw through" when turning in. The fiber is extremely resilient to abrasion, moisture, UV radiation and chemicals. Most „HQ Sportkites“ are equipped with hi-tech lines from Liros / Hamburg. Top quality - made in Germany.

Polyester

Polyester fibers are more cost-efficient than Dyneema. For "HQ" beginners' stunt kites in the entrance price ranges, refined, braided polyester lines are used. The natural elasticity of the fibers is drastically reduced by the pre-stretching of the lines. Polyester fibers also permit a small line cross-section with a reduced air resistance. The remaining extension after stretching deflects wind gusts better than Dyneema does.

Twisted or braided lines?

In cheap "no-name" kites, low-quality lines are often used that will twist very quickly. "HQ Sportkites", in contrast, are equipped with high-quality closely braided line sets only to provide a trouble-free handling.

Dancer

CALYPSO₂

BEGINNER

Beginners stuntkite, slow and easy to handle. Virtually unbreakable and a good choice for young pilots.
Including 15 m tube tail.

See pages 6 + 7 for our Eco Line stunt kites

Dancer Rainbow
Art. Nr. 112337

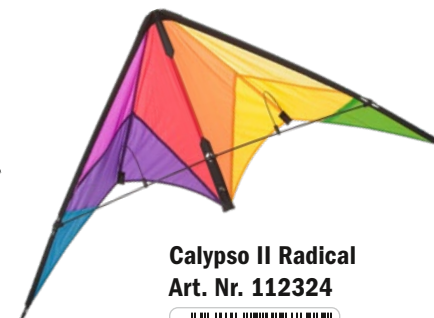

Built from an almost unbreakable fiberglass frame and durable ripstop polyester, this docile entry level sport kite is extremely robust and fun to fly. Again and again

pilots mention the good-natured and predictable flying characteristics, which make the Calypso II one of the most popular beginner sport kites in the world.

Manufactured from durable ripstop polyester and almost unbreakable fiberglass rods, Quickstep II is noted primarily for its sturdy design. The setup is simple, the flying properties are extremely docile. Quickstep II can

be flown reliably even by beginners in a wide wind range. The drag forces are moderate, but solid – the flying speed doesn't overpower the pilot. With a little practice, the Quickstep II can master simple tricks.

The BEBOP is an easy to fly stunt kite for pilots 8 years and older. Framed with fiberglass and a strong sail, it excels in low winds and is flexible and durable enough to withstand crashes with ease. By using the same clever

4-point sliding bridle as the Yukon, you can be sure the Bebob will perform well, even in higher winds. With easy control in a wide wind window and no oversteer, the BEBOP is a perfect match for beginner flyers.

Limbo II is truly a worthy successor to the well-known Limbo – more pull, more precision, sturdier, simple to assemble and the addition of bold graphite fabric accents. Despite the good-natured flight characteristics which make the Limbo II an excellent choice for beginners, this kite offers exceptional performance in

its class - pleasant design, precise and punchy flight, wide wind range. A frame of sturdy fiberglass renders the Limbo II extremely robust. No matter whether the winds are light or strong sea breezes are blowing – Limbo II is great fun even in difficult wind conditions.

The new "Yukon II" is ready to fly in the wake of its legendary predecessor. Faster, more precise and agile than the prior model, with a larger wind range and better response – the Yukon II makes learning to fly a sport kite a fun experience. With its flexible and robust

rods it is perfectly prepared even for hard landings. The "Yukon II" can perform a wide range of basic stunts (Axels, Slides, Pancakes and Backflips) so you'll never get bored.

The new Salsa III is superior to its predecessor in every respect – faster, more powerful, more precise and sturdier. With its new sail design Salsa III dances beautifully across the sky. Direct feedback makes

flight easier for novices. The frame is incredibly durable and provides for flight in a wide wind range - with tidy precision and tight loops. It masters even simple standard tricks easily. Let's dance!

Perfectly stable and forgiving for new pilots, the Jive III is a high performance sport kite you will never outgrow. Built with a tough and light weight carbon fiber frame, its wide wind range lets you fly where ever you are from coast to countryside. A Kevlar-reinforced nose and a Velcro spine release is designed to dissipate sail and

frame stress on extreme impacts. The Jive III's bridle is easily adjustable so that as skill level grows the kite can be tuned to be more radical and responsive. It also includes an optional counterweight that lets you change the balance point for advanced tricks.

The first thing you notice is the cool graphite fabric motif. But the Ion has far more to offer than eye-catching graphics. This all-rounder is extremely versatile and multi-talented – high quality, robust, wide wind range and equally suited to both gusty inland winds and strong coastal winds. Ion has good, precise trick kiting attributes and flies effortlessly

through modern trick sequences. Flic Flacs, Multi Lazys, Comets, Axel-Cascades, 540s – a dream, it's so easy. Strong winds? Fantastic ground passes or extreme loops will always give the pilot absolute controllability. The attributes of this kite make it well suited to beginners.

The Maestro III may look similar to its predecessor. But it is a completely redesigned sport kite that delivers the latest in trick flying performance. A rapid rotation of the Maestro III's longitudinal axis makes the completion of tricks easy and exceedingly precise. Equipped with a light and rigid frame made of carbon and Dynamic T15, this freestyle machine will allow you to explore all the possibilities of freestyle flight with

ease. Mylar panels give the Maestro III added stiffness and a distinguished look. Two removable 15 gram tail weights aid trick execution at stronger wind speeds. A moderate flying speed and predictable flying character make the Maestro III suitable for all skill levels. The versatility of this high-quality flying machine will never leave pilots bored.

infinity

This exceptional high-end sport kite was developed by Andreas Koopmann. Competition-ready trick flight, coupled with very good precision. This kite is simple to handle. After only a short acclimatization, the pilot gets the feeling of being one with the Infinity kite. All known tricks are possible. The sideslides are endless, the basics elegant and majestic. Back and wrap

tricks are the speciality of the Infinity. Whether it is Backspins, Jacob's Ladder, Fade, Lazy Susans, Lateral Rolls or Yo-Yos: the Infinity executes all tricks with ease and high controllability. The combination of trick and precision is impressive. In a word, it is a dream kite for play and discovery.

MANTRA
let your soul fly

Mantra - a kite for chilling, dreaming, tricking. Of course, the Mantra performs the modern tricks and moves masterfully, which it conjures up with a certain radicalism and elegance to the sky. The balance of the Mantra does not require a long settling-in period. Tricks are implemented with a high degree of precision

and traceability. The precision on long straights, in corners and loops is a real strength of this kite. The Mantra never overstrains its pilot, yet it offers a sheer untapped potential for developing its own flying abilities.

The Cirrus offers features that are otherwise only found in higher price brackets. Endless fun for beginners and experienced pilots is guaranteed with this exciting kite that combines quality with thrilling performance. Equipped with a light and rigid carbon frame, the Cirrus

offers excellent flying characteristics over a very wide wind range from 1-7 Beaufort. The Cirrus flies with a noticeable pull even during low wind conditions. In stronger wind this agile kite zooms through the sky at breath-taking speeds.

Don't let the lack of a breeze spoil your fun. The Flow is an extremely light weight kite built for doldrum days. When there is nothing left for other kites, the Flow still provides the necessary feedback to pull it across the sky. Crafted with lightweight sailcloth and robust 3mm carbon fiber frame, the Flow performs whatever,

wherever, even in difficult urban street settings. Let the Flow expand your kiting possibilities. You never know where the urge to fly may strike.

Light wind is home for the new Shade. Designed for performance flying, the Shade provides optimal feedback to the pilot even with very little wind. Such response makes flying in light breezes much easier. With its eye-catching appearance, a sail made of lightweight spinnaker nylon and feather light carbon fiber tubes, the Shade conjures up amazing maneuvers

in the sky. The Shade allows complex tricks to be performed effortlessly in the hands of a skilled pilot. With this elegant light wind machine, the lack of a breeze is a thing of the past.

Flying stunt kites is a multi-faceted sport. First popularized in the late 80s and early 90s, team flying, as a demanding discipline of kite sports, is fashionable once again. Two or more skilled pilots flying in disciplined formation will find the perfect companion in the Fellow. With the Fellow, HQ offers a calm and extremely precise kite that flies as if on rails. The Fellow provides plenty of speed control. It flies cleanly through corners and paints entire choreographies in the sky. If you are looking for a kite

with accurate flying abilities or just want to relax, then the Fellow will be the right choice for you. And if you prefer to incorporate slack-line tricks, the Fellow will not disappoint you.

should have a look at this kite. The acute design of its sail wastes no time in revealing the true character of this kite and those who enjoy battling with the wind, would make precisely the right choice with the Cruiser.

TECHNICAL DATA

The Buzz captivates through its appearance, ease and size. It appeals to ambitious beginners, who are looking for a predictable and affordable kite. Though it is also the right choice for more advanced pilots, who are not always looking for the wildest tricks and the highest speeds, but just wish to chill out during their leisure time. The Buzz is very forgiving in flight and its fiberglass rods make for a very robust frame. The shape of the Buzz and its sail with modern appearance make the kite look extraordinary attractive and highly elegant in the

sky. Buzz is a great kite for anyone, who is just looking for fun and relaxation. However, at higher wind speeds, power training will still be required, as the forces will then be quite considerable.

Whizz is one of the fastest kites in the HQ range with the potential of becoming a cult classic. This kite's potential for fun is incredible. Its unique twin keel, high-end wind range, robust frame and speed in flight make Whizz stand out. Whizz starts flying at wind speeds of 2 Bft! Just watch it go! It stays steady on course in gusty inland winds. Screaming spins occur at speeds of 4 Bft and more. A flexible keel mounting

and cambered leading edge guarantee smooth acceleration for pleasant feedback. Yet Whizz is demanding and always requires your concentration in its quest for constant movement. You simply have to keep an eye on it.

The first impression of the Ninja would be one of a rather inconspicuous kite, but it packs a lot of punch. Pilots ought to have some experience when launching this kite and then take up fighting position. Extreme spins, sudden direction changes and a strong pull forward demand continuous concentration. Here, kiting is real sport with a good dose of fun. The carbon rods of the Ninja ensure precise and stable flights. When the trailing edge tensioning line is fully engaged, response will be

even more pronounced. Advanced and experienced pilots, who feel ready to engage in that fight, will not regret their choice.

Ninja

Little Arrow flies fast, really fast. Loops look like a moving circular saw blade and make Little Arrow a challenge for eyes and hands. In high winds, this little racer requires strong lines as Little Arrow develops

surprising traction for its size. So this kite promises a fast-paced action experience for all pilots who want to push their limits.

ARROW

Arrow is an extremely dynamic “real racer” that combines power and speed in an incredible manner to provide challenging flight experiences. Astonishingly tight wing tip loops and high speeds, even in lower wind conditions, guarantee sporty and endless fun. The Arrow takes off easily and runs on rails through the air, cutting cleanly through gusty winds and staying on course – those are properties not characteristic for kites in this

class. With medium to high wind conditions, pilots must be ready for a challenge. In addition, the appealing carbon design and broad, crescent-shape appearance help makes the Arrow a unique kite.

ARROW XL

The Arrow XL leaves no doubt about its purpose - pure power and a high degree of speed. Just like its smaller brother, the Arrow XL pulls dynamically and quickly on precise straights and extreme loops through the wind window. Even gusty winds do not strain the Arrow XL a

bit. Flying the Arrow XL is a very special experience and guarantees a fun workout. The size, shape and high-tech look underline the character of this kite, which belongs to experienced hands and requires the pilot's respect.

A unique, crisscrossing spar configuration creates a leading edge that is extremely sturdy and absorbs impacts, making the Mojo perfect for first time quad-line flyers. The Mojo offers full quad-line control and is capable of forward and reverse movement, instantaneous stops, hovers and propeller spins.

Removable wind brakes help control speed and provide greater ease of control when learning. Detaching the wind brakes allows the Mojo to turn and spin extremely fast for pilots that have a good mind to give something new a try.

Single Line Mode

Dual Line Mode

The frameless Multi-Kite combines all the good things about kiting. The contemplative and relaxing side of single line kite flying and the sporty side of stunt kite flying. With this kite, both become so easy that we recommend the Multi-Kite for kids ages 10+. Flown as a single line kite, it develops light but noticeable pull. The long tube tail helps to stabilize its flying

characteristics. Simply take out part of the bridle line, attach flying straps and the Multi-Kite becomes a stunt kite. Perfect for beginners, the kite flies slowly which helps the first time flyer to perform loops, turns and dives with ease. The attached tube tail provides a colorful trail that follows the kites every move.

HQ SYMPHONY - WORLDWIDE "TOP OF THE LINE"

For more than 20 years, the name "HQ Symphony" is a synonym for most successful foil kites worldwide. From generation to generation, all Symphonys have been adapted to the latest technological standards. With their current lines all "HQ Symphonys" belong to the "top of the line" foil kites in their classes. All "HQ Symphonys" guarantee first-class components, best workmanship and extreme durability. "HQ Symphony" offers a variety of lines for different target groups:

Symphony Beach

- Designed to match the needs of beginners, provides excellent value for the money
- Symphony Beach belongs to the most successful and best-selling foil kites worldwide
- Developed with paragliding know-how
- Highly user-friendly - no foil kite in this class has fewer bridle attachment points
- Provides excellent flight performance and decent accessories
- Equipped with wrist straps or 2-line controlbar
- Compact carrying case - ideal for traveling and holidays

Symphony Pro

- The Symphony line for demanding pilots – with uncompromising components and accessories
- Developed with paragliding know-how
- Highly user-friendly - no foil kite in this class has fewer bridle attachment points
- Provides amazing flight performance and uncompromising accessories
- Sporty designs – stylish carrying cases
- Compact carrying case - ideal for traveling and holidays

Symphony Speed II

- The Symphony line for all pilots who want to push their limits
- Higher aspect ratio enables these kites to fly much faster than regular Symphonys
- Developed with paragliding know-how
- Highly user-friendly – with uncompromising components and accessories
- Provides amazing flight performance and breathtaking speeds
- Sporty designs – stylish carrying cases
- Compact carrying cases – ideal for travelling and holidays
- Detailed instruction manual (Sportkite Guide)

The latest generation of the Symphony Pro series! Fun for all skill levels looking for speed and power, the revised Symphony Pro is one of our favorite kites. This ram-air, frameless foil design feels solid in the air and doesn't fold on the edge of the wind. Sewn Dyneema bridles provide low-drag and strength for performance that is fast, stable and smooth. The larger sizes have impressive pull, so be prepared to lean back and hold on. A compact carrying case makes it easy to take on your next adventure.

Symphony Speed II 200
Art. Nr. 117720

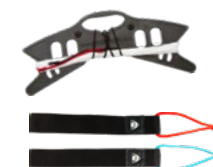

NEW!

Symphony Speed II 250
Art. Nr. 117721

The Speed series lives up to its name with blazing fast speed and smooth control. A higher aspect ratio enables these kites to fly much faster than regular Symphonys for more thrilling power. Carefully engineered with sewn Dyneema bridles for lower parasitic drag and built with the same meticulous high quality standards as our top-end Powerkites. The Symphony Speed II packs small for everyday travel, because you never know when the wind is going to blow.

Control Bar 50 cm
Art. Nr. 120529

This control bar is the perfect accessory for Symphony Beach, Symphony Pro, Symphony Speed and other smaller 2-line kites.

H Q 4 K I T E S

BORN IN THE WIND

Here on the shores of the North Sea something is in the air. It strikes you with full force, a feeling of something calling, an invitation from the wind beckons you onward with a passion to strike out and take it all by storm – the beach and the sky.

Sandy dunes, wind-swept beaches or endless blankets of virgin snow – these terrains are now your playground to become one with nature's forces.

But this is only possible if you have reliable, robust sports gear that is reassuring and feels like a natural extension of your own body. We have developed and made that perfect kite equipment since 1997.

Deeply immersed in all the many facets of wind power and passionate about wind sports, we at HQ4 understand what it takes to create the perfect kite.

We do not settle for the generic status quo. We understand that complexity does not equal superiority – and that there is Elegance in Simplicity. Pinnacles of beauty, ingenuity and performance most often are the result of less of something – not more of it.

Here at HQ4, we are obsessed with making fun kites for people who are new to the sport or looking for something new to try. HQ4 has everything you need to get started, improve snowkiting, kite buggying & landboarding. We want everyone to be able to share our obsession with kite sports. Your demands are our challenges. At HQ4 we design kites for you.

1.8
Art. Nr. 118023

2.2
Art. Nr. 118025

1.3
Art. Nr. 118021

Are you looking for an affordable kite to access the sport, but are not quite sure if you prefer kitesurfing or powerkiting, or simply want to have some fun? For pilots just like you we have developed the Fluxx, with a focus on easy handling and well-balanced flight capabilities. Even if you ground the Fluxx, a relaunch with only two lines is always possible, thanks to the robust, special shape. Use your Fluxx as a trainer kite and it will open up new sporting worlds for you – be a part of our passion.

FACTS //////////////////////////////////////

350
Art. Nr. 118049

300
Art. Nr. 118047

250
Art. Nr. 118045

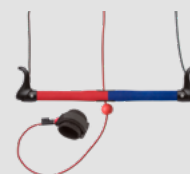

Are you looking for a kite that ticks all the boxes of a true traction kite? A kite that provides great pulling performance, ease of control and extreme durability? Then the Rush Pro trainer kite series has been developed just for you. It features an ingenious cross-bracing cell structure to survive numerous unintended impacts. An integrated 3rd line provides a safety system and offers reverse launching after a leading edge crash. The Rush Pro series will progress your flying skills so you can reach your next level.

FACTS //////////////////////////////////////

- ▶ Extremely robust cross-bracing rib structure
- ▶ 3rd-line for optimal safety and reliable reverse launch
- ▶ Ready to fly with flying lines attached
- ▶ Reduced bridle for minimal drag
- ▶ Good light wind abilities

_TRAINER KITE

RUSH PRO SCHOOL

300

Art. Nr. 118048

You want to be well-prepared for kitesurfing, snow-kiting as well as landboarding? And you are looking for a trainer kite, but would also like the challenging characteristics of a real depower kite? With the Rush Pro School 300 we have developed the perfect partner for you – robust, safe and with very easy handling. The Rush Pro School 300 flies just like a big kite, without asking too much of you. Depending on the wind conditions, your kite sessions can be anything between very comfortable and challenging. The depower of the Rush Pro School 300 allows you to shift up a gear whenever you feel like it. Power and speed to the max, but always with full control – flying the Rush Pro School 300 is just simply fun. And it helps you to make fast progress.

FACTS //////////////////////////////////////

- ▶ Complete with depower controlbar and chicken loop
- ▶ Ready-to-fly set
- ▶ Simple handling – uncomplicated flight characteristics

_HANDLE KITE ALPHA

2.5
Art. Nr. 118103

3.5
Art. Nr. 118105

1.5
Art. Nr. 118101

Are you looking for an uncomplicated beginner traction kite? We have developed the Alpha just for you. With its robust and forgivingly shaped design we have laid the foundation for maximum safety and control, while maintaining very good power development. All materials were chosen for the tough conditions that a fun beginner kite has to withstand. With all sizes perfectly geared towards a large range of wind conditions.

When you hold the Alpha lines in your hands, you feel immediately at home. In strong winds the kite will challenge you, but the quad line steering always keeps you in direct control. No matter how old you are, the Alpha will always be a fun companion.

FACTS //////////////////////////////////////

- ▶ Perfect for beginners
- ▶ Robust materials and workmanship
- ▶ High quality Dyneema flying lines
- ▶ Comprehensive accessories (quad handles, dyneema line set, kite killer safety system, ground stake)

_DEPOWER KITE

APEX

Are you looking for a kite you can trust 100%? One that won't let you down even in extreme backcountry situations? One that lets you safely scale lofty heights? Especially for you, we have developed the Apex to be one of the best companions you can find for exploring the backcountry. Maximum control, great stability and ample depower performance make this kite your perfect partner while you steadily improve your personal best. No need to fear making mistakes. The Apex is quite forgiving and makes it extremely easy for you to get started with kiting.

FACTS //////////////////////////////////////

- ▶ Excellent control in extreme situations
- ▶ Very stable, great depower performance
- ▶ Ready to fly, with good power always on hand
- ▶ Extremely easy to fly

ACCESSORIES (INCL.) //////////////////////////////////

_KITE DETAILS

APEX

_Performance

All of the Apex features are perfectly tailored to the needs of inexperienced or backcountry pilots. A smooth transition of traction as well as a great depower performance make this wing extremely controllable. By powering up in loops it has enough reserves for responding quickly to inclines in the terrain or changes in wind direction.

_Shape

The Apex has a small number of cells and a thick profile. The kite has been specifically designed for flying in difficult wind conditions with maximum stability. The outer cells remain deliberately unleashed to generate better aerodynamics at the wing tips.

_Bridle

The bridle of the Apex is made from robust, sleeved Dyneema, providing long life even in the toughest conditions. Mixer line and pulleys are precisely matched.

_Material

The sail is made from durable 40D ripstop nylon with a great track record of reliability over the years. The inner cells are reinforced with additional webbing at the air vents.

_ONE BAR FITS ALL

ONE BAR 2.0

Adjustable Relaunch Balls

For easy and safe relaunch.

Covered Backlines

To protect the lines from damage and avoid tangles after hard crashes.

More Depower

The new bar setup results in a wider depower range that can be smoothly trimmed with our adjustable Clamcleat.

Soft Barends with integrated Line Keepers

For more comfort and secured lines when winded up.

New Swivel

The new swivel positioned above the chicken loop makes for a far cleaner bar design. The flying lines can now be untwisted by hand at any time.

The new One Bar 2.0 is the result of creative thinking by our development team and valuable input from our customers – many small changes mean a considerable step forward. This latest version of the One Bar is even lighter, more versatile and more straightforward than ever before. The new bar design means that you can fly all

our kites with the same bar. The new One Bar 2.0 is available in lengths of 49 and 55 cm, and each comes with 24 m pre-stretched Dyneema lines. In combination with our optionally available safety leash, the new One bar 2.0 is the perfect cockpit for your kite.

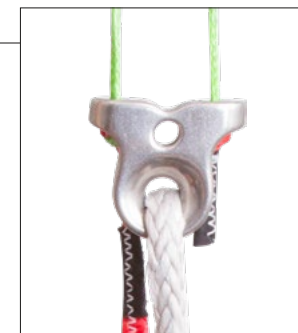

Adjustable Stopperball

The adjustable stopper ball helps to limit the bar range after the safety was activated. It is optimally pre-trimmed for use with larger kites.

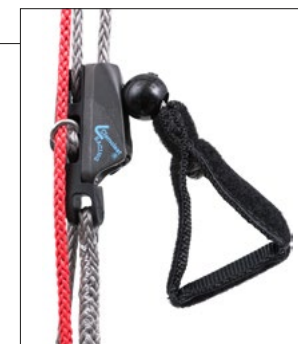

Light-weight Line Splitter

The light-weight line splitter significantly reduces the weight in the center of the bar, resulting in less movement especially in light-wind conditions. The low-friction polish of the splitter makes a pulley unnecessary.

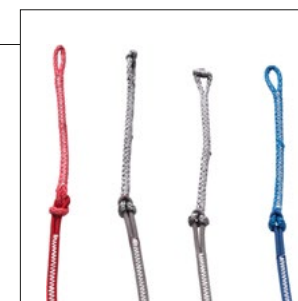

Low-friction Stainless Steel Ring

Low-friction stainless steel ring for better guidance of the safety line.

Dyneema Lines

High quality pre-stretched Dyneema lines with almost no elongation for a super direct feel. Sleeved and stitched ends with a maximum load of 300 kg.

49 cm

Art. Nr. 12055588

55 cm

Art. Nr. 12055589

HQ4 2-Line Control Bar 50 cm
Art. Nr. 120529

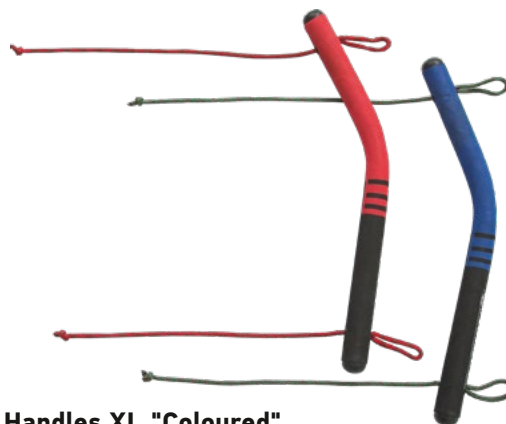

Control Bar for Rush and smaller 2-line fun kites (e.g. Symphony).

HQ4 3-Line Control Bar 50 cm
Art. Nr. 120528

Control Bar for 3-line kites (e.g. Rush Pro or Hydra).

HQ4 Quad Handles XL "Coloured"
Art. Nr. 120533

- Made of heavy duty aluminium
- EVA coating makes the handles easy to hold and they won't get slippery
- 37 cm

HQ4 Kite Killer
Art. Nr. 120538

HQ4 ACCESSORIES

HQ4 Safety System (Hand Leash)
Art. Nr. 120527

This safety system for 2-line control bars (e.g. Fluxx) makes it possible to release the control bar in an emergency without losing the kite.

HQ4 ACCESSORIES

HQ4 Ground Stake
Art. Nr. 120539

Ground stake for securing landed kites. In signal colour.

HQ4 One Bar 2.0 Chicken Loop Ultra
Art. Nr. 1205510

Newly developed chickenloop - releases fast and accurate, super easy assembly.

HQ4 Harness Line Fix with Quick Release
Art. Nr. 119421

HQ4 Leashline
Art. Nr. 119423

This new HQ4 leash line sets new standards in kite safety. This is the first leash line to offer an individually adjustable release force that can be increased or decreased depending on the demands of the rider. Due to a completely transparent trigger mechanism, riders can rest assured that the system is set properly.

HQ4 Strop Line
Art. Nr. 12053301

The HQ4 Strop Line features spliced loop ends that can be attached to any regular pair of quad handles. Heavy duty coating to protect the Dyneema line from wear. Easy and quick to attach or release. Length: 55 cm.

Surf Lock
Art. Nr. 119415

Never be locked out again! Surf Lock is the ultimate solution to outdoor key storage during outdoor activities. Surf Lock can be conveniently placed on your vehicle, outside of your home or business, for easy access without fear of theft! With its durable construction, you can be sure that your valuables are protected. Just enter your 4-digit combination, leave your keys and your worries behind!

RAID ATB'S

„Victorian Style“ Wind Spinners

The Victorian Era (1837-1901) was a period of transformation. In the decorative arts, this time did not produce merely one style, it produced many. Historical revivals, an anti-industrial return to nature, futurism, and Oriental exoticism all coexisted in the public imagination, and were often found in decorative combinations. Our Victorian style collection of wind spinners are reminders of this vibrant era and will add a splash of warm and inviting flair to your home. All items of this range captivate with a charming blend of style and colour.

Spinning Balls & Personality Objects

Our Spinning Balls and Personality Objects are constructed with weatherproof and fade-resistant ripstop polyester. Let yourself be enchanted by the harmonious interplay between colour, light and wind.

Wind Turbines

Our Wind Turbines are beautiful classics. Install them on a pole and let the wind take them for a spin or add them in intervals to your single kite line as a custom expression of your playful side. Wherever you put them, they make smiles a breeze.

Ocean Mobiles

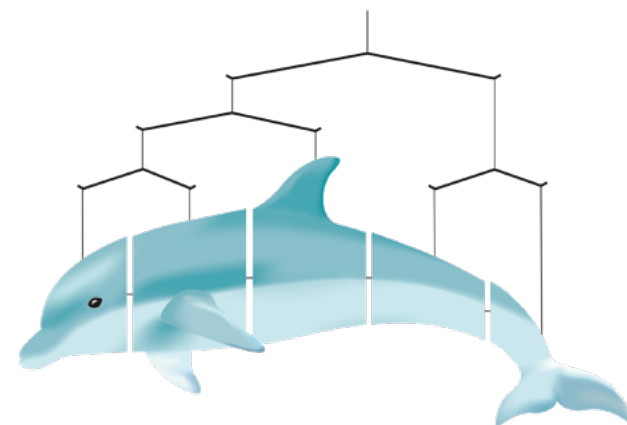

Take the ocean to your home with our colorful Ocean Mobiles. Moving gracefully in the lightest air movement, these mobiles replicate the swimming motion of the sea creatures they mimic. Ocean Mobiles come completely assembled and ready to hang in your home or on your porch. They are ideal for children's rooms, living rooms, offices, patios, or any space you want to brighten with these impressing sea creatures. All Ocean Mobiles are made of tear-resistant and weather-proof ripstop polyester and come in an attractive packaging with interesting information about each individual fish.
